

Meaning API - Telbee Integration / Testing Doc

- Create User for Quick Channel/Campaign
- Create a Quick Channel/Campaign
- Send Voxes (At-least 5 or more with some meaningful notes, And at-least 30 secs of data)
- Once complete, Make a POST request on https://api-dev.telbee.io/api/campaigns/:campaign_id/analyze Replace, campaign_id with the campaign you are using.
- If successful it should give you a raw response of the API. Which is only sent for testing purposes,
- After that you can pull campaigns via GET request : <https://api-dev.telbee.io/api/campaigns/ID> (Replace the ID with the campaign ID.
 - It should have 2 new fields.
 - **is_analysis_run** (boolean which indicates if analysis has already been run or not, It will be used on the front-end to decide if they need to show the button or not.
 - **meaning_clusters** is the second field that is returned, Which contains a string of comma separated clusters we found when we ran the analysis. This can be used to show some UI if needed for different clusters we have.
- After that you can pull voxes via GET request : <https://api-dev.telbee.io/api/campaigns/ID/voxes> (Replace the ID with the campaign ID.
 - It should have 1 new field.
 - **vox_tag** (This contains the string on which cluster this vox belongs to)
